

10 Reasons to Use Dwyer Aluminum Cabinets

REASON #2 MOLD

Despite earthquakes, tsunamis and other natural disasters, Dwyer cabinets have stood the test of time – not to mention the elements. For nearly 100 years, we’ve designed solutions specifically for public housing, schools and government environments. Sustainable and durable, Dwyer’s metal cabinets are built to withstand humid and harsh environments, such as those found in Hawaii, Japan, Korea and Guam.

Why are Dwyer’s aluminum and steel cabinets better than plywood?

Damaged wooden cabinets due to mold.

Asthma, allergies and sinus infections result from exposure to mold spores, some of which are toxic. In recent years, published accounts confirm that mold assaulted both the Hilton’s Kalia Tower and the Hale Koa Hotel, causing skin rashes and ear, eye and throat irritations, resulting in lost revenues, finger-pointing and major legal issues.

Keep your buildings safe by opting for Dwyer aluminum or steel cabinets rather than wooden ones, on which mold feeds. Don’t encourage mold any longer... Demand Dwyer.

To learn more about how Dwyer steel or aluminum cabinets last the life of the building while preventing mold, please visit www.dwyerproducts.com, or call me anytime.
